COMPANY OVERVIEW

Beacon Industrial Services provides customized solutions for the cleaning and maintenance of process equipment, mechanical systems, and facility infrastructure to many Fortune 500 companies. Over 20 years of expertise in predictive maintenance, preventative maintenance and maintenance agreement contracts have made us a trusted name in industrial cleaning. We understand the need for timely and professional response combined with a skilled workforce and advanced cleaning methods. Our services improve the efficiency of equipment while minimizing downtime, leading to improvement in output and reduced costs. We start with a site visit by our expert cleaning team to analyze the specific requirements for each project. Then, based on the results of the analysis, a custom solution plan is created. In addition to annual projects including shutdowns, outages, installation of new equipment and decommissioning, many clients incorporate Beacon Industrial Services as part of their site-specific maintenance plan. We perform cleaning outside the scope and training of in-house staff, such as confined space entry and rescue and working at heights using aerial lifts. Preparation for audits, corporate visits, regulatory compliance, and certifications, along with post documentation of project completion provide an additional level of quality control to assist site personnel.

SERVICES

Beacon Industrial provides specialized industrial cleaning of process equipment, mechanical systems and facility infrastructure to industrial, commercial and institutional clients. Cleaning of air-handlers, duct work, exhaust systems, air/heat coils and heat exchangers. Cleaning of machinery, industrial exhaust dust and fume collection systems, change-outs of bag-house filters and central vacuum systems. Blast cleaning; pressure washing, dry ice blasting and sodium bicarbonate blasting to remove dirt, grease, rust and coatings. Contact vacuuming of overheads to remove dirt, combustible dust, cobwebs and byproduct. Hand wiping ceilings, walls, conduit and piping to remove grease and residue oil mist. Confined space entry trained for tanks, blenders, industrial ovens, silos and elevator pit cleaning. Cleaning of clean rooms to designated measurement.
